PSEUDONYMITY IS NOT ENOUGH

Monero 'misses out' on Decentralised Identity

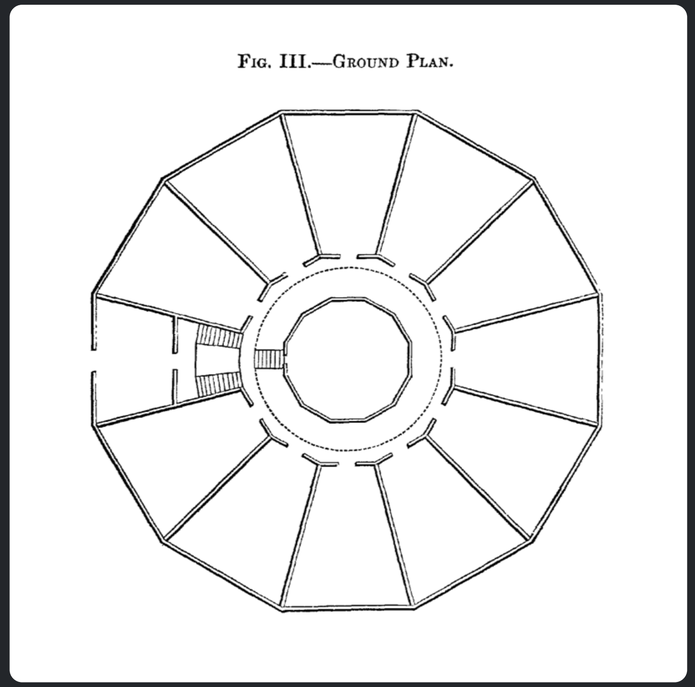
Contents

BACKGROUND AND OBJECTIVE

Research Background and Positioning

Which implications do technological policies have on digital identity by private public partnerships for Monero?

"Social technology [...] allows for a 'technisation' [of] new administrative [...] power between authority and subject" (Leibetseder, 2011, p.15).



Bentham (1778), p.38

Peripherality Unites Monero and Small Jurisdictions

	#	Name	Price	1h %	24h %	7d %	Market Cap	Volume(24h)	Circulating Supply
☆	26	Monero XMR	$136.40	0.15%	1.69%	1.14%	$2,495,226,477	$35,370,522 259,156 XMR	18,293,441 XMR
☆	27	Ethereum Classic ETC	$15.34	0.17%	0.71%	1.73%	$2,171,078,491	$82,632,122 5,385,266 ETC	141,500,510 ETC
☆	28	Stellar XLM	$0.07966	0.45%	2.84%	3.46%	$2,142,886,791	$34,986,347 439,327,433 XLM	26,901,614,149 XLM
☆	29	Bitcoin Cash BCH	$106.69	0.24%	1.21%	2.76%	$2,072,226,639	$63,905,155 599,112 BCH	19,422,444 BCH

Coinmarketcap (2023)

Local productions' dependence on innovations and technologies of the centre polarises, thus, manifests peripherality (Komninos and Sefertzi, 1998, p.47, cf. Sefertzi (1996)).

Large Networks' Claim on Sovereignty

- large distributed ledgers already have did:methods (W3C, 2023)
  - Bitcoin (did:btcr)
  - Ethereum (did:ethr)
  - Solana (did:sol)
- identities persisted on the public ledgers threaten privacy
- IPFS was introduced for institutional identity data storage
- Hyperledger Foundation (2020) marketed un-linkable credentials
  - Ed25519-based cryptography
  - Pedersen commitments
  - decoupled session identification from holder binding

EXISTING IDENTITY SOLUTIONS
a Systematisation

Governmental Identity Schemes are those really exerting Technological Sovereignty.

European Commission eIDAS Trusted List

National Identity Schemes-A Prudent Approach

"[T]he transferability of MRTD chip's signature on the challenge [proves] [t]he MRTD chip was indeed at a certain date and time. [S]uch proves (sic!) can be misused to track persons" - BSI, 2015, TR-30111-1, p.22.

"Commands for installing, updating, and using the eSign Application are out of scope of this specification" (BSI, 2015, TR-30111-3, p.69).

Mobile Driving Licence - a paradigm shift

MAC provides better privacy to the mdoc holder because it does not require the mdoc to produce a potentially non-repudiable signature over mdoc reader-provided data.

“Security requirements regarding storage of credential information, including the mdoc private key are out of scope for this document.”

ISO/IEC 18013-5:2021, p.53

SD-JWT Privacy & Security Considerations

5.1.3. Holder Public Key Claim

If the Issuer wants to enable Holder Binding, it MAY include a public key associated with the Holder, or a reference thereto.

It is out of the scope of this document to describe how the Holder key pair is established. For example, the Holder MAY provide a key pair to the Issuer, the Issuer MAY create the key pair for the Holder, or Holder and Issuer MAY use pre-established key material.

"Colluding Issuer/Verifier or Verifier/Verifier pairs multiple sessions to the same user on the basis of unique values encoded in the SD-JWT (Issuer signature, salts, digests, etc.)."

IETF (2023), SD-JWT, Section 9.4

Private Keys & Personal Identifiers (PIDs)

"PID attestation MUST include all the information (as an attribute or as any other signed value) required to perform verification of the holder binding by a Relying Party" (European Commission, 2023, p.24).

"A PID Provider may issue a PID set to the EUDI Wallet" with level of assurance (LoA) **high** (European Commission, 2023, p.21).

Mandatory eIDAS Attributes	Optional eIDAS Attributes	Possible additional optional attributes
Current Family Name	Family Name at Birth	Nationality/Citizenship*
Current First Names	First Names at Birth	Optional attributes used at national level, e.g., tax number, social security number etc.
Date of Birth	Place of Birth	
Unique Identifier	Current Address	
	Gender	

cf. European Commission, 2023, p.22-23

DID:XMR
privacy preserving authenticity

Properties of DID:XMR

- Monero's dual key pair setup mimics the security of governmental IDs (Koe et al., 2020)
  - Pedersen commitments ensure privacy preserving key rotation
  - Sub-accounts promise to minimise the identity management overhead
- DID:XMR integrates two cryptographic operations into one DID method
  - authentication and ID presentation are decoupled, but integrated
  - interoperability without reliance on Anonymous Credentials
  - permissioned disclosure of auditable key rotation
- simple, did:btcr-based DID method
  - transaction hash-based identifiers are well known
  - no need for server-sided verifiable data registries
